

COMBINED WFI +PS GENERATOR [KOMBO]

PHARMACEUTICAL TECHNOLOGIES
BRAM-COR

BRAM-COR KOMBI COMBINED WFI + PS GENERATOR [KOMBO]: is a unique system which produces WFI and PS by combining the double functions of a multiple effect distiller and of a Pure Steam generator on a single skid.

A central SCADA controls the two units, providing separate or concurrent outlet of Water for Injection and/or Pure Steam. Combined with our pre-treatment systems Bram-cor is your one stop shop of Water Purification.

All Bram-Cor systems are designed and manufactured and in accordance with cGMP regulations, completely validatable, and are suitable for use in FDA and EMA regulated facilities. Visit us at: www.bramcor.com

COMBINED WFI +PS GENERATOR [KOMBO]

**THERE ARE TWO DIFFERENT PS AND WFI GENERATORS AVAILABLE:
THE SIMULTANEOUS AND THE ALTERNATIVE DESIGN**

A simultaneous PS/WFI generator: uses multiple effect technology to drive the PS into an outlet. During this process, the first column is enlarged. This allows a higher capacity WFI to produce a lower percentage of PS, which is then extracted through a by-pass done by opposite valves.

The alternative PS/WFI generator: uses a distiller and a PSG on the same frame, and is also managed by the same control board. Thus, if the capacity of PS and WFI become unbalanced, the control board is accessible (i.g. when the PS is too close to the capacity of the WFI or our client requires simultaneous generator).

All Bram-Cor systems are designed and manufactured and in accordance with cGMP regulations, completely validatable, and are suitable for use in FDA and EMA regulated facilities. Visit us at: www.bramcor.com
